**DETAILED ACTION**

***Allowable Subject Matter***

Claims 1-19 and 21-24 allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of dynamically determining the spatial position and orientation of a slider including: simultaneously measuring values from on or more beams of light reflected from a slider-disk interface, said values respective corresponding with multiple testing points on the surface of the slider which are space apart from each other, in combination with the rest of the limitations of claim 1.

As to claim 12, the prior art of record, taken alone or in combination, fails to disclose or render obvious, an apparatus for dynamically determining the spatial position and orientation of a slider including: measuring means for simultaneously measuring values from on or more beams of light reflected from a slider-disk interface, said values respective corresponding with multiple testing points on the surface of the slider which are space apart from each other, in combination with the rest of the limitations of claim 12.

As to claim 23, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of dynamically determining the spatial position and orientation of a slider including: simultaneously measuring values from on or more beams of light reflected from a slider-disk interface, said values respective corresponding with multiple testing points on the surface of the slider which are space apart from each other, said values include the relative intensities of two or more wavelengths after reflection, said values are simultaneously measured

using a series of cascaded mirrors having pinholes, in combination with the rest of the limitations of claim 23.

As to claim 24, the prior art of record, taken alone or in combination, fails to disclose or render obvious, an apparatus for dynamically determining the spatial position and orientation of a slider including: measuring means for simultaneously measuring values from one or more beams of light reflected from a slider-disk interface, said values respectively corresponding with multiple testing points on the surface of the slider which are spaced apart from each other, said measuring means include the relative intensities of two or more wavelengths after reflection, said measuring means are simultaneously measured using a series of cascaded mirrors having pinholes in combination with the rest of the limitations of claim 24.
